200**

PRODUCTION

In all companies the ability to pivot and to be able to bring in new innovations may well determine the success of that business. Here at Vision Meditech we specialise in new product development. We are experts at creating a range of new products whether it be Food Supplements through to new and exciting bespoke formulations. We are also experts in manufacturing capsules that are custom made to suit our customer's needs.

We really excel in the cosmetic world where we create bespoke creams, serums, oils, balms and patches. All these products are tested under cosmetic conditions, and all are registered on the cosmetic EU portal.

HOW IT WORKS

The initial phase is to have a consultation with our team to determine what the product would look like and if the project is feasible. Once we have discussed ideas and agreed to proceed the project will move to the sampling phase.

The sampling phase is where our team start working on the project, the objective here is to create a working product that be sent to the customer for approval. We aim to complete this phase within a few weeks of the initial meeting.

Once the customer approves the product it can then move to the manufacturing phase where we aim to complete the manufacturing of the products within three weeks.

LEAD-TIMES

This is very much dependent on what product the customer wants to formulate. A simple formulation such as an amendment on an oil or cream would probably only take a couple of weeks.

Creation of a brand-new product such as a new cosmetic that is not currently on the market can take a few months to go through formulation and testing. We aim to finish most of our new products within several weeks, this is to allow our customers to bring their new products to the market in a fast and efficient way.

(MOQ'S)

MINIMUM ORDER QUANTITIES

With new product ideas, the majority of our customers want to test out the concept before placing large orders, therefore we have tried to keep the MOQ's down as much as possible. This means that most of our products start with MOQ's in the hundreds rather than the thousands.

PACKAGING

We understand that branding your product is key to its success, therefore we help you in placing your product in the correct packaging to give it the best chance of success. If you need help with Packaging please ask us.
